

# ACID CLEANERS

## NU-WELL® 100 PELLETIZED ACID

### APPLICATION

*Nu-Well* 100 pelletized acid is formulated for pouring directly into the well. While it may be dissolved and pumped into the well as a liquid, the pellet form rapidly

falls through the water column, providing concentrated acid cleaning power at the bottom of the well. *Nu-Well* 100 pellets are ideal for wells with short to moderate lengths of screen at the bottom.

### DESCRIPTION

- Dry, pelletized acid that sinks in water for cleaning wells
- Cleans calcium and magnesium carbonate scale, iron deposits and moderate biological growth
- Contains an inhibitor for protecting metal surfaces and penetrants for cleaning deep into filter packs and formations

- Contains color indicator to allow visual monitoring of pH during treatment
- Can be poured directly into the well without dangerous splashing and without releasing vapors, as with hydrochloric acid
- Easy to use and transport
- NSF certified for potable water well use

## NU-WELL 110 GRANULAR ACID

### APPLICATION

*Nu-Well* 110 granular acid is effective for cleaning wells, either introduced at the well head in granular form or dissolved and pumped into the well as a liquid.

### DESCRIPTION

- Dry, granular acid blend for cleaning residential, irrigation, commercial and municipal water wells
- Cleans calcium and magnesium carbonate scale, and moderate iron deposits
- Contains inhibitor for protecting metal surfaces and penetrants for cleaning deep into filter packs and formations
- Contains color indicator to allow visual monitoring of pH during treatment
- Will not release hazardous vapors, such as hydrochloric acid, when poured directly into the well
- Easy to use and handle
- NSF certified for potable water well use
